MT Technical Refresh – Guidelines for the User Acceptance Test (UAT)

Dear Client,

Following the [MN 66/2017](#) dated 7 September 2017, please we inform you that the Guidelines for testing Monte Titoli upgraded infrastructures after Technical Refresh are now available.

The document is available on MT-X Platform in the documentary section “Documentation/Post Trade Participants Committee - PTPC/MT Technical Refresh/Guidelines for UAT and includes also an high level list of test scenarios for which verification is recommended. We recommend to execute test on functionalities relevant for their own business, while technical interventions have been performed, no functional modifications have been made to the software.

Note that the test session will take place between 23 October and 17 November 2017, with a goal to migrate the new infrastructure into production environment during the weekend of 2 – 3 December 2017 depending on the testing outcome.

All clients interested in participating in the test session are invited to inform the Post Trade Technology Services office by email at ptts-somt@lseq.com.

Confirmation that texts have been carried out, with an indication of the outcome, should be sent to the same address by 24 November 2017. Monte Titoli will consider the absence of feedback as tacit consent to the migration of infrastructures.
