T2S release 1.3.1 – Release into production

Dear Client,

Following the completion of internal and external tests and the receipt on 13 December of a report from the European Central Bank in which no objections were raised to deployment of Release 1.3.1 of Target 2 Securities (T2S), we wish to confirm that the release will take place on 16 December 2017, entering into production as of Monday 18 December 2017.

In anticipation of the go-live, DCPs are invited to verify that their production configurations are correct and capable, if necessary, of replicating in that environment the same situation used to test the defects that are part of the release.
